Education

2017–Now	Doctor of Philosophy Analysing supernovae in the Dark Energy Survey using Hierarchical Bayesian models to help constrain the nature of dark energy.	University of Queensland
2010–2016	Bachelor of Science (Physics)(Hons, 1 st) Thesis: Analysed the Baryon Acoustic Oscillation signal imprinted in the large scale structure of the universe using the WiggleZ survey.	University of Queensland
2010–2015	Bachelor of Engineering (Software)(Hons, 1 st) Thesis: Created the first online client-only web-application to compute redshifts from telescope spectra.	University of Queensland

Experience

2017, 2016	Lawrence Berkeley National Laboratory <i>Research Fellowship</i> Research fellowship at LBNL to work on Bayesian Hierarchical Modelling and its applications to Supernova Cosmology. Specifically, investigating how to use high dimensional hierarchical models to model individual supernova instead of populations to provide better constraints on cosmology using supernova discovered by the Dark Energy Survey.	Berkeley, California
2015–2016	Gemini & Australian Astronomical Observatory <i>Research Intern</i> Utilised photometric data of Maffei 1 to determine globular cluster candidates and their properties for spectroscopic follow-up. Utilised data reduction pipelines, automated analysis methods in Python, and applied machine learning techniques to perform object classification.	La Serena, Chile
2010–2014	GBST <i>Software Developer</i> Developed business intelligence reporting solutions, designing and developing server and client based web application code, creation of large scale SQL queries, optimising queries, databases and applications for network, processing and memory constraints, developed back-end server code and front-end web applications.	Brisbane, Queensland, Australia
