Website: CosmicCoding LinkedIn: samuelreay GitHub: samreay

Skills

Python, C, C++, Javascript, SQL, Java, Stan, Git Machine learning Numerical Optimisation Visualisation Bayesian Statistics Model fitting

Awards

Nobel Laureate Delegate **UQ** Future Superstar ASA Bok Prize Science Grad. of the Year AIP Prize University Medal (Science) University Medal (Eng.) AAO Honours Scholarship A.W. Oakes Scholarship Harriet Marks Bursary Helen Thompson Prize IET Student Prize David Andrew Krnak Prize **UO** Future Leader **IEEE Student Prize** GroundProbe Prize RWH Hawken Scholar Alstom Prize John Black Prize

Communication

Academic presentations in more than a dozen institutions and countries.

Science outreach appearances on multiple TV shows, radio channels and public events.

Publications

6 first author 45+ contributing author Areas of software, statistics and astrophysics.

Experience

2020-Now **University of Queensland** Brisbane, Queensland, Australia

Postdoctoral Researcher

Continued research using Hierarchical Bayesian modelling to perform supernova cosmology. Created data pipelines and high-fidelity numerical simulations to quantify methodologies. Implemented machine learning classifiers to discriminate between supernova types. Applied model selection techniques to models of large-scale-structure in the universe.

SuperDataScience 2019-Now

Sunshine Coast, Queensland, Australia

Course Instructor

Created courses on statistical analysis and data manipulation in Python for students. Focused on applied statistics and utilisation of modern code packages, with attention given to visual output and workflows for continuous validation of methodology.

2017, 2016 **Lawrence Berkeley National Laboratory**

Research Fellowship

Research fellowship to work on Bayesian Hierarchical Modelling and its applications to Supernova Cosmology. Specifically, investigating how to use high dimensional hierarchical models to model individual supernova instead of populations to provide better constraints on cosmology using supernova discovered by the Dark Energy Survey. Involved using numerous MCMC fitters, Stan, Gaussian processes and many numerical techniques.

2015-2016 **Gemini & Australian Astronomical Observatory**

La Serena, Chile

Berkeley, California

Research Intern

Utilised photometric data of a nearby galaxy to determine globular cluster candidates and their properties. Utilised and created data reduction pipelines, automated analysis methods, and applied machine learning techniques to perform object classification.

2010-2014 **GBST** Brisbane, Queensland, Australia

Software Developer

Developed business intelligence reporting solutions, designing and developing server and client based web application code, creation of large scale SQL queries. Optimised queries, databases, and applications for network, processing, and memory constraints. Developed back-end server code and front-end web applications, plus API's to connect the two.

Education

2016–2020 **Doctor of Philosophy**

University of Queensland

Analysing supernovae in the Dark Energy Survey using Hierarchical Bayesian models to help constrain the nature of dark energy.

2010-2015 **Bachelor of Science** (Physics)(Hons, 1st)

University of Queensland Thesis: Analysed the Baryon Acoustic Oscillation signal imprinted in the large

scale structure of the universe.

Bachelor of Engineering (Software)(Hons, 1st) 2010-2014 University of Queensland

Thesis: Created the first online client-only web-application to compute red-

shifts from telescope spectra.
